

SyncNBackup

SyncNBackup is a tool to backup or synchronise folders with files.

Features:

- Option to back up folder A to folder B, with the option of making B a true mirror of A (delete directories/files in B not found in A) or plain backup (leave directories/files in B not found in A).
- Option to synchronise folder A with folder B with the help of state files to track changes on both sides.
- Changes can be previewed before backup or sync is executed.
- Configuration for file history from no history to up to 10 previous versions when replacing files.
- Configuration for file deletion to Recycle Bin or permanent delete.
- There is also a command line interface available to run jobs created in the main tool from scripts.

SyncNBackup.zip	Zipped files to run SyncNBackup - unzip to a folder and run the executable separately
------------------------	---------------------------------------------------------------------------------------

Note: use of this tool is at your own risk. I don't take responsibility for loss of files due to improper use or software errors.
